

THARUNYA SWAMINATHAN

BE Computer Science & Engineering | Student Founder | BuildMe

Saranathan College of Engineering, Tamil Nadu | Expected Graduation: 2029 • 9894983239 • GitHub: tharunya0105-afk • LinkedIn: Tharunya Swaminathan

FOUNDER PROFILE

Computer Science student and student founder building technology for real-world problems. Founder of **BuildMe**, a construction decision-support platform focused on helping residential-project engineers make better cost and planning decisions before and during construction. Hands-on experience across product development, data-driven cost estimation, open source, and AI-enabled prototypes.

STARTUP EXPERIENCE

BuildMe — Founder | Construction Decision-Support Platform | 2026–Present

- Identified a recurring residential-construction problem: difficulty connecting **design decisions, contractor quotations, and construction costs** before committing to a project.
- Built a working web prototype focused on **freelance civil engineers managing multiple residential sites**, with homeowners as beneficiaries.
- Developed a **Cost Intelligence engine** combining CPWD base rates with time/location adjustments and construction-cost reference data.
- Built workflows covering **cost estimation, design-to-cost analysis, project/site monitoring, budget health, and contractor-quote intelligence**.
- Collected and structured construction-cost datasets and quotation data to create a benchmark for improving estimation reliability.
- Implemented the product using **Next.js, React, TypeScript, Tailwind CSS, API routes, Prisma/SQLite, and AI integrations**.
- Iterating around customer discovery and validation with a focused engineer-first MVP.

OPEN SOURCE

Eclipse OpenJ9 — Contributor

- Contributed code-level improvements to the Eclipse OpenJ9 production-grade open-source project.
- Worked on **const-correctness improvements** across C++ compiler/environment components.
- Updated declarations, definitions, and related usages while maintaining consistency with existing codebase conventions.
- Used Git workflows including branches, diffs, status checks, and repository change tracking.

SELECTED PROJECTS

Autonomous Crop Pest & Disease Containment Network — Agentic AI | Hackathon

- Designed an MVP for crop-disease identification using leaf images, confidence scoring, environmental factors, and previous cases; structured detection, prediction, and response components.

Prism SDK — AI Privacy Layer — React | TypeScript | Vite

- Developed components for a privacy-focused layer designed to protect sensitive information before interaction with AI applications.

TECHNICAL SKILLS

Languages: Java, C, Python | **Development:** React, TypeScript, Next.js, Vite, REST APIs | **Data/Backend:** SQL, Prisma, SQLite | **Core CS:** Data Structures & Algorithms, OOP | **Tools:** Git, GitHub, Linux, VS Code

EDUCATION

Bachelor of Engineering — Computer Science & Engineering

Saranathan College of Engineering, Tamil Nadu | 2025–2029 | Relevant coursework: Data Structures, OOP, Data Science, Digital Principles & Computer Organization

ENTREPRENEURIAL DIRECTION

Building BuildMe from a functional prototype toward a **validated, customer-driven startup**, with emphasis on customer discovery, real construction data, and a focused engineer-first MVP.
